

Press Release

IMMEDIATE

19 June 2003

mymobilephone to do polyphonic ringtones

mymobilephone to provide polyphonic ringtones

mymobilephone.com.au has announced that it will shortly be launching polyphonic ringtones for a wide range of handsets. This service will complement the existing monophonic ringtone service and provide the capability for compatible handsets to play MIDI files as ringtones.

Users will be able to preview and listen to a range of polyphonic ringtones on-line prior to ordering. Polyphonic ringtones are ordered via premium rate IVR (Interactive Voice Response) in the same way ringtones, graphics and Java games are currently ordered. Users make note of the ringtone code and once ordered, a sms is sent to the recipients mobile which contains a WAP URL. The user is then prompted to download the polyphonic ringtone to their handset. Handsets must be compatible with the service and be WAP/GPRS enabled.

Polyphonic ringtones will be available in July 2003.

compatible handsets

Compatible handsets must be configured for WAP/GPRS. The following handsets will be supported:

Motorola: C300, C330, C360, T720

Nokia: 3510, 3510i, 3530, 3585, 3590, 3650, 5100, 6100, 6200, 6610, 6650, 6800, 7210, 7250, 7650

Panasonic: GD67, GD75, GD87, GD88

Sagem: MY-G5, MY-X5

Samsung: A800, N600, Q100, S100, SGH-600, SGH-620, T100, T400, T500, V100

Sharp: GX10

Siemens: C55, M55, S55, SL55

Sony-Ericsson: P800, T300

More handsets will be added in the future.

about polyphonic ringtones

Polyphonic ringtones are the latest type of ringtone tunes available for mobile phones. Polyphonic ringtones are infact a special type of music file, similar to MIDI files used on the Internet to play music. Polyphonic ringtones give a much richer sound quality including multiple sounds, percussion, strings, instrumentals and a range of electronic synthesiser tones. Polyphonic ringtones are played using the speaker of a mobile phone and the quality varies from handset to handset.
